

# Testing of Mobile E-Wallet Application

## Optimus QA

### The Client:

Our client provides the marketplace with an application that allows users to access their pay portal from an iOS and Android device.

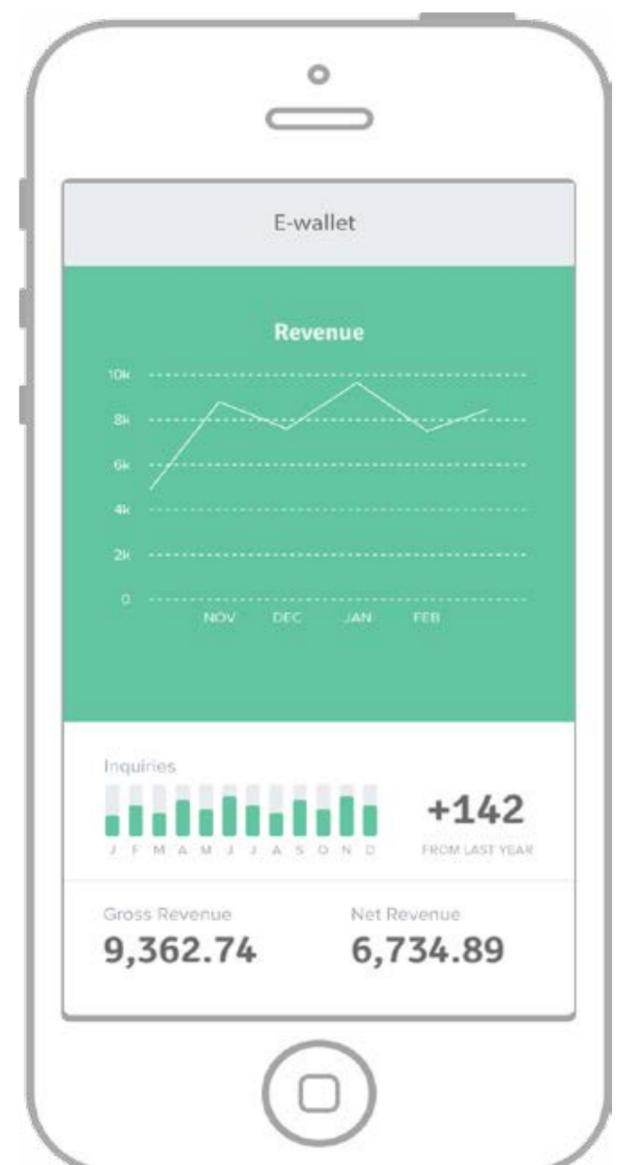

They can check their balance, view transaction history and cashout their received payments to their saved cashout account

### The Challenge:

Our client was looking to test this e-wallet application. The application was built on Android and iOS and the client wanted us to install the build on a different series of iPhones and Android devices to test the application's expected flow.

### Why Optimus:

With our experience in mobile testing, and our availability as a local team with a global presence they knew we could be trusted as an extension to their technology team.

## How Optimus Helped:

In order to help our client meet their testing needs our team put a strict process in place:

1. We met with the client and briefed them on our plans. We asked our initial questions and shared all of our current observations.
2. We created test cases against the requirement document and mock ups.
3. Our team shared and incorporated the feedback for the test cases regularly.
4. The defects were logged in a Google Doc, they were identified with functional testing and regression testing (included localization testing) in various stages.

### The Process:

1. Requirement understanding and scope defined.

2. Test case creation from requirements and mock ups from requirements and mock

3. Installation and execution on multiple platforms ups

4. Defect Logging

5. Sharing the test

When developing a payment process application, errors are unacceptable. After following a proven process, we were able to find the applications defects and assure the client that they were delivering a quality product.

## About OptimusQA:

OptimusQA is a leading independent Software Testing and QA Services company in North America. With over 75 global clients, Optimus provides software testing services to software companies and enterprises. Optimus is headquartered in Vancouver, Canada and has delivery centers in Canada and India.
